Batch: 7th
Department of Software Engineering
Metropolitan University, Sylhet***

1. Introduction

Artificial Intelligence tools can assist beginners in creating webpages by generating code, suggesting design ideas, and helping organize website content. In this assignment, two free AI tools, Grok and ChatGPT, were used separately to create a personal portfolio webpage. The purpose of this task was to explore how different AI tools can assist in webpage development and to compare their outputs based on usability, code quality, design quality, explanation, and limitations. The portfolio was designed to represent me as a Software Engineering undergraduate student while presenting my skills, projects, education, interests, and future goals. A pink, elegant, modern, and professional visual style was selected to give the portfolio a distinctive personal identity.

2. Selected Topic

For this assignment, I selected the **Personal Profile Page** topic.

I created a personal portfolio website that presents information about me as a Software Engineering undergraduate student. The website includes sections such as **Home, About, Skills, Goals, Projects, Education, Currently Learning, and Contact**.

The design focuses on professionalism, personality, and a distinctive pink visual identity. The portfolio was also designed to be responsive for different screen sizes.

The selected topic is one of the topics provided in the assignment instructions.

3. AI Tools Used

Two free AI tools were selected for this assignment:

Tool 1: Grok

Grok was used to generate the first version of the personal portfolio website.

Tool 2: ChatGPT

ChatGPT was used to independently generate the second version of the personal portfolio website.

The same detailed prompt was provided separately to both tools so that their outputs could be compared more fairly.

4. Prompt Used

The same prompt was given separately to both Grok and ChatGPT.

The prompt instructed the AI tools to create a polished personal portfolio website for **Atifa Khan**, a Software Engineering undergraduate student. It specified a pink visual identity, website sections, responsive behavior, animations, accessibility considerations, project information, education, goals, and contact information.

The prompt also requested separate index.html, style.css, and script.js files. The prompt specifically instructed the tools to use HTML, CSS, and Vanilla JavaScript.

The complete exact prompt is included in **Appendix A**.

Exact Prompt

Prompt Used for Both Grok and ChatGPT

Create a polished, cute, elegant, modern, and professional personal portfolio website for Atifa Khan, a Software Engineering undergraduate student.

Use a distinctive pink-themed visual identity with dark berry pink, rose pink, bright pink, blush pink, pale pink, gradients, soft shadows, rounded cards, elegant typography, and subtle glassmorphism. The design should look professional and modern rather than childish or generic.

Create the following sections:

- Home / Hero
- About Me
- Skills
- Languages
- Goals / Aspirations
- Projects
- Education
- Currently Learning
- Contact
- Footer

The hero section should introduce Atifa Khan as a Software Engineering student and include a typing animation with:

- Software Engineering Student
- Aspiring Software Engineer
- Future Researcher
- Technology Enthusiast

Include attractive CTA buttons, a developer-style code card, decorative pink elements, and subtle animations.

Use the following skills and technologies as learning/work areas: C, C++, Python, Kotlin, JavaScript, HTML, CSS, Flask, Android, Git, GitHub, VS Code, Android Studio, Figma, XAMPP, AI/ML, Data Science, Research, Software Testing, and Computer Networks. Do not exaggerate expertise.

Include these projects:

- GyanAdda
- MediBot
- Surah Al-Kahf Website
- Personal Portfolio

Do not invent project links or personal information.

The Education section should present my current B.Sc. in Software Engineering studies and areas such as programming, software development, databases, AI, networking, and software testing.

The website should be fully responsive for desktop, laptop, tablet, and mobile devices. Test layouts around 375px, 390px, 412px, 768px, and desktop widths. Prevent horizontal overflow and ensure text remains readable.

Use clean, beginner-friendly HTML, CSS, and Vanilla JavaScript. Create three separate files:

1. **index.html**
2. **style.css**
3. **script.js**

JavaScript should include:

- Typing animation
- Scroll reveal using IntersectionObserver
- Mobile hamburger menu
- Back-to-top button
- Subtle cursor glow on desktop
- Smooth interactions

Respect **prefers-reduced-motion** for accessibility.

Make the final website visually connected, professional, responsive, and suitable for a university Software Engineering student's portfolio.

Return the complete working code for **index.html**, **style.css**, and **script.js**, ensuring all IDs, classes, and JavaScript selectors

match correctly.

5. AI Tool 1 — Grok

The first AI tool selected for this assignment was Grok.

The prompt was entered into Grok to generate a personal portfolio website. Grok generated the portfolio with a pink-themed design and separate HTML, CSS, and JavaScript files.

The generated website contains a navigation bar, hero section, skills section, goals section, project showcase, education timeline, currently-learning section, contact section, and footer. The generated HTML identifies the website as “Atifa Khan | Software Engineering Portfolio.”

The project section contains projects such as GyanAdda, MediBot, Surah Al-Kahf Website, and Personal Portfolio.

Screenshot 3 — Grok Portfolio

Figure 3: Portfolio webpage generated using Grok

Grok Code

The complete final code generated by Grok is provided in Appendix B.

      spark.style.left = Math.random() * 100 + '%';
      spark.style.animationDuration = (12 + Math.random() * 10) + 's';
      spark.style.animationDelay = (Math.random() * 14) + 's';
      spark.style.fontSize = (0.55 + Math.random() * 0.5) + 'rem';
      container.appendChild(spark);
    }
  }

```

6. AI Tool 2 — ChatGPT

The second AI tool selected for this assignment was ChatGPT.

The same prompt was provided to ChatGPT separately to generate another version of the personal portfolio website.

ChatGPT generated a responsive pink-themed portfolio website containing sections for Home, About, Skills, Goals, Projects, Education, and Contact. The hero section introduces Atifa Khan as a Software Engineering student and includes a typing animation for different professional interests.

The portfolio also contains responsive layouts for smaller screen sizes and interactive elements.

Screenshot 4 — ChatGPT AI Response

Figure 4: ChatGPT-generated AI response

Screenshot 5 — ChatGPT Portfolio

Figure 5: Portfolio webpage generated using ChatGPT

ChatGPT Code

The complete final code generated by ChatGPT is provided in Appendix C.

<!-- =====
      ABOUT
    ===== -->

<section id="about" class="section">

  <div class="section-heading reveal">

    <p class="section-label">
      ABOUT ME
    </p>

    <h2>
      A Little About Me
    </h2>

    <div class="heading-line"></div>

  </div>

  <div class="about-grid">

    <div class="about-text reveal">

      <p>
        I am a Software Engineering student with a strong
        interest in technology, programming and problem
        solving. I enjoy learning how software works and
        turning ideas into practical applications and
        websites.
      </p>

      <p>
        My journey in software engineering is continuously
        growing. I believe that becoming a good engineer
        is not only about writing code, but also about
        understanding problems, researching solutions and
        continuously learning.
      </p>

      <p>
        I enjoy exploring different areas of technology,
        including web development, application development,
        artificial intelligence, data science and software
        engineering.
      </p>

```

</p>

<p>

I am particularly interested in expanding my knowledge beyond classroom learning by working on personal projects, experimenting with new technologies and eventually contributing to research-oriented work.

</p>

<p>

My long-term aim is to become a versatile software engineer who can combine technical knowledge, creativity and research to solve real-world problems and create meaningful digital solutions.

7. Comparison of the Two AI Tools

The two generated portfolios were compared using the evaluation criteria provided in the assignment. The assignment specifically requires comparison based on **Ease of Use, Code Quality (HTML/CSS), Design Quality, Clarity of Explanation, Errors or Limitations, and Preferred Choice.**

Evaluation Criteria	Grok	ChatGPT
Ease of Use	Easy to use because the detailed prompt produced a complete portfolio structure with little additional instruction.	Easy to use and produced a complete portfolio from the same detailed prompt.
Code Quality (HTML/CSS)	The generated code has organized sections, responsive layouts, and detailed CSS styling.	The generated code is also organized and includes responsive layouts and structured CSS styling.
Design Quality	Produced a polished pink-themed portfolio with animated visual elements and a developer-style appearance.	Produced a polished pink-themed portfolio with an elegant layout, pink visual identity, animations, and responsive design.
Clarity of Explanation	The response focused strongly on generating the implementation and code.	The response was organized and relatively easy to understand while working with the generated code.
Errors or Limitations	Some generated information and links require manual checking to ensure that they accurately represent the user.	Some generated information and technical details also require manual verification.
Preferred Choice	Grok is a good choice for quickly generating a visually rich portfolio.	ChatGPT is my preferred choice because I found the organization and overall presentation easier to understand and work with.

Comparison Summary

Both tools were capable of generating a complete portfolio website from the same detailed prompt. Their outputs were similar in overall structure and visual style because they received the same requirements. However, there were differences in how the generated code and content were presented. Both tools also demonstrated that AI-generated code should be reviewed and tested instead of being accepted without checking.

8. Reflection

Through this assignment, I learned how free AI tools can assist beginners in designing and developing a personal webpage. Using the same prompt with Grok and ChatGPT helped me understand that different AI tools can produce similar results while still having differences in code organization and presentation. I learned that a detailed prompt is important because it allows an AI tool to understand the required design, sections, responsiveness, and functionality more clearly. Both generated portfolios provided useful ideas and working structures, but I preferred the ChatGPT output because I found its organization and overall presentation easier to understand and work with. I also learned that AI-generated code should not simply be copied without checking it, because personal information, links, and technical details may need verification. Overall, the assignment helped me understand how AI can be used as a development assistant while still requiring human review and decision-making.

9. CLI Requirement

The assignment requires interaction with at least one selected AI tool through a **free command-line interface (CLI)**. The submission should include the AI tool used, installation/startup command, sample prompt, and a screenshot of the terminal output.

9.1 AI Tool Used Through CLI

AI Tool: Gemini CLI

9.2 Installation / Startup Command

Installation command:

```
npm install -g @google/gemini-cli
```

Startup command:

```
gemini
```

9.3 Sample Prompt

Create a simple personal portfolio webpage for a Software Engineering student using HTML and CSS. Include Home, About, Skills, Projects, and Contact sections.

9.4 Terminal Screenshot

```
Tips for getting started:
1. Create GEMINI.md files to customize your interactions
2. ./help for more information
3. Ask coding questions, edit code or run commands
4. Be specific for the best results

This folder is untrusted, project settings, hooks, MCPs, and GEMINI.md files will not be applied for this folder.
Use the /permissions command to change the trust level.

Skipping project agents due to untrusted folder. To enable, ensure that the project root is trusted.

> Create a simple personal portfolio webpage for a Software Engineering student using HTML and CSS. Include Home,
About, Skills, Projects, and Contact sections.

Portfolio Design Planning: Initiate the portfolio website project by drafting a detailed design plan for user approval.

✓ Enter Plan Mode Mandatory planning for a new application prototype, as per the system instructions.
Switching to Plan mode: Mandatory planning for a new application prototype, as per the system instructions.

✓ ReadFolder . → Found 44 item(s).

+ I've analyzed your request and I'm ready to design a modern, high-impact personal portfolio for a Software Engineering student.

Proposed Strategy
- Visual Identity: A sleek "Dark Mode" tech-inspired theme using a palette of deep charcoal backgrounds and vibrant neon blue/cyan accents.
- Architecture: A fast, responsive single-page application (SPA) layout built with semantic HTML5 and modern Vanilla CSS.
- Interactive Features:
  - Glassmorphism: Semi-transparent cards with backdrop blurs for a premium feel.
  - Smooth Scrolling: Fluid navigation between sections.
  - Hover Animations: Dynamic scaling and shadow effects for project cards and skill tags.
- Content Sections:
  - Home (Hero): A bold introduction with a call-to-action button.
  - About: A clean biographical layout highlighting your engineering focus.
  - Skills: A categorized grid of modern, pill-shaped skill badges.
  - Projects: A high-end grid layout for showcasing your work with interactive cards.
  - Contact: A professional contact section with styled links and a visual form placeholder.

Does this strategy align with your vision, or would you prefer a different aesthetic (e.g., light mode, minimalist, or high-contrast)?

? for shortcuts
```

Figure 6: AI tool accessed through CLI and terminal output

10. Conclusion

This assignment demonstrated how free AI tools can be used to assist in developing a personal portfolio webpage. Grok and ChatGPT were both able to generate portfolio designs based on the same detailed requirements. The comparison showed that both tools can provide useful code and design ideas, although their presentation and organization may differ. The experience also demonstrated the importance of writing a detailed prompt and reviewing AI-generated code before using it. Overall, AI tools can be useful development assistants for beginners while human judgment and verification remain important.
